Fleet Loan

A Fleet Loan is a comprehensive, structured credit facility tailored for companies that need to acquire, manage, or upgrade a large group of vehicles simultaneously. Ideal for logistics, rent a car companies, and large-scale distribution businesses in Dubai, fleet financing allows you to bundle multiple vehicles into a single, manageable loan agreement with optimized interest rates and unified repayment terms.

Step 1: Fleet Requirement & Capacity Planning

We evaluate your entire business expansion plan. Rather than looking at one vehicle, we assess how a fleet addition impacts your projected revenue, operational costs, and overall debt-service coverage ratio (DSCR).

Step 2: Corporate Credit Line Sourcing

Instead of a basic car loan, we negotiate a Fleet Credit Facility or Master Lease/Loan Agreement with UAE banks. This gives your business an approved financial umbrella/limit that you can draw down from as you add vehicles.

Step 3: Advanced Documentation & Business Case

In addition to Trade Licenses and bank statements, we help you prepare a solid business case. This may include existing client contracts (proving the need for a fleet), fleet management profiles, and bulk proforma invoices from commercial dealers.

Step 4: Commercial Credit Committee Review

Fleet loans involve higher capital risks, meaning they go to senior bank credit committees. We proactively manage this intense underwriting process, defending your business model to secure a high-limit fleet approval.

Step 5: Fleet Insurance & Global Mortgage

We negotiate bulk, fleet-wide commercial insurance policies to save you premium costs. The bank establishes a global mortgage framework over the incoming asset lot.

Step 6: Phased Disbursement & Fleet Deployment

Disbursement can happen all at once or in phases. As the dealers ready the batches of vehicles, the bank releases funds against the master credit line. Your fleet is registered, tagged, and deployed simultaneously.
